

## IMPLEMENTING JOIN TOGETHER NEWS FEEDS USING FEEDROLL

1. Visit the following page and get the news layout ready to display on your website:  
<http://www.feedrollpro.com/syndicate.php?id=33>
2. Choose one of the content options next to **Select Feed**. For our combined feed of articles, choose the **Alcohol, Tobacco and Other Drugs** or select **Alcohol News** or **Tobacco News**.
3. Choose your preferences in the **Custom Design** section. Click on the **update** button below to review an example of your design on the right side of the page. If you wish, you can make adjustments in the design options and click on update again to see your changes in the example. (You can adjust settings and click on the **update** button as many times as you like.)
4. When you are happy with the display on the right, then copy all of the code in the **Javascript Include** section into one of the pages on your own web site. (The news articles will appear in line with the other items on the page, so paste this code wherever you want it to appear on the page.) Save and post the news page to your site.
5. Change your web site's link to the old news/resources plug-in page to the new news page.  
(Example of old url: <http://www.jointogether.org/plugin.jtml?siteID=SITEID>)

### Note:

\* If you are using a content management system to make updates to your web site, then it will be necessary to switch to **HTML mode** in your page editor before you copy & paste in the news feed script code.
